Welcome

This tutorial includes steps intended to familiarize you with the drilling simulator. After completing a tutorial step, tap the left foot pedal to advance. Once you complete all tutorial steps, you may begin the study session.

Step 1 of 6: Moving the drill

Move the stylus to move the drill around the surgical field.

Step 2 of 6: Recentering the drill in view

To quickly recenter the drill and keep the haptic device in the working area, double-tap the stylus action button.

Step 3 of 6: Moving the microscope
The view in the simulator is controlled by the position of the Quest headset.
To move the camera, press and hold the button on the microscope handle and then reposition the Quest headset.
Holding the microscope button, look left, right, up and down.

Microscope handle button
Hold
Quest headset

Step 4 of 6: Zooming in and out

To zoom in, press the button on the microscope AND press the left foot pedal. To zoom out, press the button on the microscope AND press the middle foot pedal.

Zoom in, then zoom out.

Keep the microscope button held while zooming: tapping the left pedal on its own moves on to the next step.

Step 5 of 6: Activating the drill

To activate the drill, press and hold the right pedal. Practice making contact and removing bone.

This practice bone is restored before the study session.

Step 6 of 6: The pause menu

The pause menu pauses the simulator. The burr size and type are changed there.

To open the pause menu, press and hold the left foot pedal. Open it now.

Using the pause menu

Tap the left pedal to move down, and press the middle pedal to select. Each list ends with Back.

To close the menu, select Resume, or hold the left pedal and choose Yes.
